Comments: I can provide my engineering and ideas designs on the Gold King Mine. I am sorry I did not respond earlier for my gifts. I had other issues on water usage hear in the valley. I have a great relationship with Natural Resources hear and the state. I have also provided help on E coli break out to the EPA and Del Norte a while back. I have a lot of designs and highly knowledgeable with water and energy. I can share wants not in Federal research that I give to them for the new ways to come. I can not physically install but have great gifts on inventing equipments and energy thats years ahead or decades. A tractor almost killed me 2 years ago while I was in my trunk. Master plumber, mechanical fitter, purification on many issues, steam fitter, and have engineering in 3 of these fields. I worked on the largest projects hear and also have designs on sewer plants to produce energy and purify the water more than known today or around. Nothing is impossible when the passion is within and not a forced to perform with stress of an employer. This info and designs is free for I have the passion and the gifts within. I do not care for fame or money to save the water crisis. Plumbers are proud to provide good water to the masses. Its our duty and that my friends is priceless to me. God Bless and I will do what I can for y'all. Thank you McCarthy for being there for me. I owe you this and get prepared to have more designs on others for the "Clean Water Act" that Im pushing to our President. Natural Resources and others are on board. Congress will need to put there thinking hats on for the new way is rolling in hot and the old ways failed but my generation is shining more stronger than ever and getting better daily. This is my fate. This is my calling. This is happening as we speak. Time to embrace the "Clean Acts of Water and Energy Crisis!"
